- Server Maintenance (Windows and Linux)
- Google Analytics/AdWords/Search Engine Optimization
- CMS management and training
- Customer service awareness in regards to problem Solving

EXPERIENCE

10/2013-Present Digital Media Technical Coordinator/Webmaster, Missouri Southern State University

I am responsible for several servers related to multiple websites and web developed apps on campus. I manage the content on the digital signage screens located throughout the campus focused on students and employees. I am the sole programmer for the needs of the marketing department including the website, signage, digital marketing and other projects as requested. I have created and implemented several designs to allow maximum flexibility to enhance the message and appeal to the desired audience through creative ways. I was responsible for the migration process of a legacy website to a responsive web design including managing a group of over 100 people to update content via a CMS and conform to specific consistency standards. The IT Department leverages my skills to work on various monitoring and security projects.

2008-Present CEO/Project Lead, CephaCom

Owned and operated a private enterprise focusing on design, hosting, management, and consulting for the web. CephaCom also specializes in IP Telephony. I continue to host websites and provide email support for several loyal customers who have been with me for over ten years.

09/2012-10/2013 Server – VM Tech, Missouri Southern State University

I worked on several university wide projects including multiple CMS platforms, implemented several web based tools used by faculty, staff, and students. I developed a digital signage network and was responsible for updates, programming and experimenting with new ways to leverage this technology. I was responsible for changes to the internal intranet for both students and employees.

01/2011-08/2012 Sales and Development, Wireless Connections

While I cultivated sales to businesses of Dish Network, DirecTV and Windstream Internet service, I was also the technician that serviced our IPPBX systems both internally and for the company clients. I sold, planned, developed and oversaw several projects including public address systems, digital signage systems, and home audio systems. I also served as the on-site programmer and special technician for systems including access controls, IP Surveillance, Wireless Video, and various other projects. I would integrate various systems to create functions not directly supported by the application/system in use.

EDUCATION

2000-2007 Bachelor of Music and Worship, Joplin, MO, Ozark Christian College

LEADERSHIP/VOLUNTEERISM

2009-Present Deacon of Technology

I am the Deacon for the multimedia crew for a large church in the area. This includes setup for service every week as well as funerals and weddings as well as scheduling and training the multimedia team. I also manage the church's computer network, phone system and sound systems. I am responsible for purchasing and installing new equipment.
